Patent and Trademark Office after November 29, 2000 will be pre-published at eighteen months According to the Pre Publication Rules, every patent application received by the United States from the effective filing date. When the application is published the contents, including the sequences, will become prior art.

Published_Applications_NA contains nucleic acid sequences; the search results will have the Two new databases have been created to hold the pre-published sequences:

Published_Applications_AA contains amino acid sequences; the search results will have the

extension .rapb.

requests that the changed application be published again. In such instances, the "1" at the end of application. The first 4 digits show the calendar year the application was published. The next 7 beginning of each calendar year. Each application published is given the next number in order. The "A" indicates a utility patent application and the "1" shows that this was the first time the digits represent when the application was published. This 7-digit number starts at zero at the application had been published. If the applicants submit changes to the application, they may Publication Number is US20021234567A1. The "US" indicates the application was a U.S. Each pre-published application is given a unique Publication Number. An example of a

Sequences in the PGPub database are public information; it is permissible to leave these

Patent No. US20020081703A1
GENERAL INFORMATION:
APPLICANT: Estell, David Aaron
TITLE OF INVENTION: Human Protease and Use of Such Protease for Pharmaceutical
TITLE OF INVENTION: Applications and for Reducing the Allergenicity of No. US2002
TITLE OF INVENTION: Proteins
FILE REFERENCE: GC532
                              Sequence 24, Application US/10029217A

Sequence 24, Application US/10029217A

Patent No. US20020164735A1

GENERAL INFORMATION:

APPLICANT: OLSON, ENC N.

TITLE OF INVENTION: METHODS AND COMPOSITIONS RELATING TO A CARDIAC-SPECIFIC

TITLE OF INVENTION: MCLEAR REGULATORY FACTOR

FILE REFERENCE: UTSD:695US

CURRENT TILING DATE: 2002-03-19

PRIOR PILING DATE: 2000-12-21

NUMBER OF SEQ ID NOS: 32

SEQ ID NO 24

LENGTH: 3907

                                                                                                                                                                    The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, pest-herpetic neuropath, in neuronal pain and phantom limb, burn pain, brain or spinal cord trauma, myocardial infarct, physical trauma, brain or spinal cord trauma, myocardial infarct, physical trauma, perhaptal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                              as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeninal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducting neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
0
New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

amyotrophic lateral sclenosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-horpetic neuralgia, neuromuscular diabetic neuropathy, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystomia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as
                                                                                                                                        New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, obst-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                    The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as
New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

in channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neurodegenerative disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuromuscular disorders, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, rischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, troating essential infarct, physical trauma, providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                           The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phytai, or hypodyycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated in channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroamuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroamal pain and phantom limb, burn pain, post-herpetic neuralgia, neuroamal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ងន

New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

Claim 9; Page 29; 231pp; English.

neuroprotective agents

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neuroxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma,
post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; artidiabetic; cardiavascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              M, Garrett JE, Watkins M, Cruz LJ, Shon K;

New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, brain or spinal cord trauma, myocardial infarct, physical accident, brain or spinal cord trauma, myocardial infarct, physical trauma, providing muscle relaxation, treating essential bloppharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide of the invention.

Sequence

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, accident, as unforcation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated but channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystohia, and for anti-winkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotaxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, abrain or spinal cond trauma, myocardial infarct, physical trauma, and the stroke is the stroke of the stroke or is the stro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as

The present sequence is a mu-conopeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

```
The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegeneative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, or ischaemia which typicall pain and sasociated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, trowning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                     voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

                                                                                                                                                                                                               The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, tronning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
                                                                                               New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 MMSKLGVLLTVCLLLFPLTALPLDGDQPADRPAERMQDDISSDEHPLFDKRQNCCNG--G 60

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders with as amyotrophic lateral sclerosis, neuroamuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroamuscular and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cond trauma, myocardial infarct, physical trauma,
                                                                                                                                                                                                                                                                                                                                                                      drowning, suffocation, perinatal as phyxia, or hypodycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use.                                                                                                                                                                                                                                                                      ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cond trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.

Ξ,
                                                                                                                                                                                                                                                             The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuropial, injury associated with hypoxia, anoxia or ischaemia which trgically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, brownigh suffocation, perinatal as physia, or hypodytocamic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                              New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence

                                                                                                                                                                                                       The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, to providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystohia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                             New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic; anaesthetic; neuromuscular blocking agent; neuroprotective; pain; cerebroprotective; anticonvulsant; antiaging; antidiabetic; cardiovascular; vasotropic; cardiant; tranquilizer; antimigraine; neurodegenerative disease; neuromuscular disorder.
                                                                                                                                                                                     Watkins M, Cruz LJ, Shon K;

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroamscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroamal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischmenia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, browning, suffocation, perinatal as physia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystomia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                        New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated and channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neurolgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, myocardial infarct, physical trauma, perinatal as phyta, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      . 7

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, brain or spinal cord trauma myocardial infarct, physical trauma, perlnatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                         New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as neuroprotective agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mu-conopeptide; snail; venom; voltage-gated sodium channel; analgesic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated inc channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroamuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuroam pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, drowning, suffocation, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-winkle use. The present sequence
                                                                                                                                                                                                                                                                                                                                                                              New mu-conopeptides useful for treating disorders associated with voltage-gated sodium channels, e.g. stroke or pain, as neuromuscular blocking agents, as local anesthetic agents, as analgesic agents and as

ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuroduscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischaemia which typically follows stroke, cerebrovascular accident, brain or spinal cord tramma, myocardial infarct, physical tramma, perinatal as phyxia, or hypoglycaemic events, for providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-wrinkle use. The present sequence is a mu-conopeptide preprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage gated
                                                                                                                                                                                                                                                                                                                       ¥
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention relates to mu-conopeptides derived from snails, which can be in the treatment of disorders associated with voltage-gated ion channels. These may include neurodegenerative disorders such as amyotrophic lateral sclerosis, neuromuscular disorders, post-operative or severe chronic pain, stroke, trigeminal neuralgia, diabetic neuropathy, post-herpetic neuralgia, neuronal pain and phantom limb, burn pain, epilepsy, for reducing neurotoxic injury associated with hypoxia, anoxia or ischmenta which typically follows stroke, cerebrovascular accident, brain or spinal cord trauma, myocardial infarct, physical trauma, brain or spinal cord trauma, myocardial infarct, physical trauma, providing muscle relaxation, treating essential blepharospasm and other forms of focal dystonia, and for anti-winkle use. The present sequence is a mu-conopeptide preprotein of the invention.
